The possibility to produce glass-to-glass and glass-to-
metal seals is brought about first of all due to the fact
that these materials show differences in their contrac-
tion, as it arises when these materials are first heated,
and are then cooled down. By measuring the coefficient

*Partial differential equations, Integration

In the present article first the general derivation of the
Fokker-Planck equation is given. Next some applica-
tions are treated and finally the limits of applicability
are briefly discussed.
